one of the leading contributors of historical articles to me over the past fifty years was fritz hirschfeld in preparation for the united states bicentennial year in 1976 the editors of mechanical engineering contracted with engineer historian hirschfeld for a series of articles on the country's early engineering history just a few years later as the society was nearing its centennial in 1880 the editors again turned to hirschfeld and asked him to write a series of articles about the founding of asme and important early mechanical engineers hirschfeld's articles collected here provide the foundation for the early portion of this volume building upon hirschfeld's foundation we selected a wide assortment of other articles about aspects of mechanical engineering history in the united states from the revolutionary war until recent times we largely limited our selections to those articles published in mechanical engineering magazine during the last fifty years i.e. 1971-2021 even for this period the volume does not include all such articles due to limitations in length and editorial judgments for instance some articles duplicated coverage of specific events or innovations in such cases we picked what we deemed the best or most comprehensive of overlapping articles we also decided to focus this volume on the history of mechanical engineering in america we thus excluded articles on historical developments largely occurring outside the united states at some future time we may harvest both pre 1971 me articles and unselected post 1971 articles as well as articles focusing on non american mechanical engineering achievements for a separate collection or collections of the more than seventy articles collected in this volume well over ninety per cent were drawn from issues of me published during the past fifty years five pieces however were drawn from outside that chronological limit or from other sources we have for example included a 1933 biographical article from me about american engineer george h corliss corliss's innovations in the design and manufacture of steam engines and related devices helped establish the united states as a major player in the manufacture of prime movers corliss was considered by his contemporaries to be such a significant figure in mechanical engineering circles in the united states that we elected to include him he was after all asked to serve as the first president of asme an offer which he declined a second exception is another biographical article one on edwin reynolds a significant steam engine designer it was authored by thomas fehring one of the editors of this volume reynolds worked for a time for the corliss steam engine company as did other notable american engineers such as erasmus darwin leavitt second president of asme and alexander l holley one of the founders of the society before moving to allis chalmers reynolds made significant improvements in steam engine design he was president of asme in 1902-03 and three of his steam engines have been designated as historic mechanical engineering landmarks by the
